

Press Release

DDS Authentication Solution EVE MA is Now Compatible with VMware Horizon View™

DDS Inc. (location of head office: Nagoya-shi, Aichi Prefecture, President and CEO: Kenji Miyoshino hereinafter referred to as “DDS”), a company that provides various security solutions starting with fingerprint authentication, has developed an authentication platform plug-in of EVE MA, which operates with VMware (U.S.) company's VMware Horizon View™ virtualization software, and we will begin to provide the content in Japan.

This solution will be on display at our exhibit at the Information Security EXPO Autumn [October 23-25).

With today's never-ending incidents of information leakage such as outflow of customer lists, the need for information leak prevention solutions within a corporate system is further increasing.

With high functionality and reliability, DDS identification authentication platform system has received high evaluation from user companies as shown below, and we have earned the No.1 position in domestic shares.

On the other hand, VMware has over 500,000 client companies and 55,000 partners, and has the top share in virtualization solutions. They are a global company with offices all around the world.

With close coordination with U.S. VMware, DDS materialized fingerprint authentication in a PCoIP protocol environment. By combining biometrics authentication and virtualization solutions, spoofing in the virtualization environment, which is already widespread within companies, can be prevented, and a synergistic effect with the increase in the reliability of the existing system can be obtained. There is no worry for the user to remember complex passwords or misplacing IC Cards, and the convenience also increases.

In the future, we look to expand upon the combined solutions of DDS authentication solution EVE MA and VMware Horizon View™ 5.2 through partners of both companies.

-----  
Senior Director, VMware, Inc.  
Comments of Kyoki Nakamura, End User Computing Asia Pacific Japan

VMware, Inc. welcomes the announcement of DDS fingerprint authentication solution EVE-MA supporting our VMware Horizon View. With close coordination with VMware, DDS made operation of EVE-MA on Horizon View's PCoIP protocol possible. By DDS supporting Horizon View, EVE-MA is able to provide merits of advanced security to the customers of VMware. DDS and VMware will collaborate with partners of both companies, and continue to propose the combination of products of both companies.

[About VMware]

VMware (head office: Palo Alto, California) provides virtualization solutions supporting the activation of business in the cloud era and cloud infrastructure solutions. VMware offers support for migration through methods which are developmental and that correspond with the business needs specific to companies for customers building/providing/using IT resources. VMware has more than 500,000 customers (companies) and 55,000 partners and is a global company with offices around the world. Sales of the company in 2012 were \$4.61 billion.

For more information on VMware, please refer to [www.vmware.com/jp](http://www.vmware.com/jp).

[About VMware Horizon View]

VMware Horizon View™ is VMware's industry-leading desktop virtualization solution. Not only does Horizon View simplify desktop management, security, and control, but regardless of the device or network, it provides an excellent desktop service. Furthermore, by building Horizon View on top of VMware vSphere, the most widely spread virtualization platform in the industry, it simplifies IT management of large-scale importation while reducing the TCO (total cost of ownership) relating to virtual desktop infrastructures (VDI). It materializes the best end user experience in the industry.

### **Future Development**

Last year, DDS Fingerprint Authentication Unit was No. 1 in domestic shares in fingerprint authentication products according to the market research report 2013 Comprehensive Study of Network Security Business (Fuji Chimera Research Institute, Inc.). Utilizing the advantages we have with these products, we look to actively develop cooperation/alliances with other companies.

<<About DDS Inc.>>

As a leading company for fingerprint authentication solutions, our company has worked actively in technology development since our establishment through industry-university cooperation starting with the **Umezaki Laboratory of Nagoya Institute of Technology**. Currently, we develop/sell information security products corresponding with the diversifying information security solution needs starting with the Multi-authentication Platform EVE MA and Fingerprint Authentication Solution EVE FA.
